REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a transmission apparatus. A search of prior art references has failed to teach or suggest a transmission apparatus, comprising:

“an interference signal detection circuit connected between said output terminal of the transmission apparatus and said actuating input of said pulse-generating circuit, said interference signal detection circuit providing an actuating signal causing the pulse-generating circuit to generate the pulse sequence again as stipulated by the actuating signal” as disclosed in claim 14.

“an interference signal detection circuit connected to said pulse-generating circuit, said interference signal detection circuit providing an actuating signal causing the pulse-generating circuit to generate the pulse sequence again as stipulated by the actuating signal; and a sensor disposed adjacent the transmission channel, and wherein said interference signal detection circuit is connected between said sensor and said actuating input of said pulse-generating circuit” as disclosed in claim 16.

“an interference signal detection circuit connected to said pulse-generating circuit, said interference signal detection circuit providing an actuating signal causing the pulse-generating circuit to generate the pulse sequence again as stipulated by the actuating signal, said interference signal detection circuit having a detector circuit, connected to said output terminal of the transmission apparatus, and an actuating-signal-generating circuit, connected downstream of said detector circuit, in a signal flow direction, said actuating-signal-generating circuit providing

the actuating signal in dependence on an output signal from said detector circuit” as disclosed in claim 17.

“an interference signal detection circuit connected to said pulse-generating circuit, said interference signal detection circuit providing an actuating signal causing the pulse-generating circuit to generate the pulse sequence again as stipulated by the actuating signal, wherein: said at least one output terminal is one of two output terminals including a first output terminal, for coupling to a first channel, and a second output terminal, for coupling to a second channel; said input terminal and said first output terminal having a first pulse-generating circuit connected there between, and said input terminal and said second output terminal having a second pulse-generating circuit connected there between; said first output terminal and a control input of said first pulse-generating circuit having a first interference signal detection circuit for providing a first actuating signal connected there between; and said second output terminal and a control input of said second pulse-generating circuit having a second interference signal detection circuit for providing a second actuating signal connected there between” as disclosed in claim 19.

“an interference signal detection circuit connected to said pulse-generating circuit, said interference signal detection circuit providing an actuating signal causing the pulse-generating circuit to generate the pulse sequence again as stipulated by the actuating signal, wherein said at least one pulse-generating circuit is configured to repeat the pulse sequence after a prescribed edge of the actuating signal and at a prescribed level of the input signal” as disclosed in claim 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
